Emergencies

January 16, 2026

Emergency Support

Time is the adversary

We do not wait for the dust to settle. We enter the storm.

In the anatomy of a crisis, the gap between preservation and

total loss is measured in hours, not days. Standard procedure assumes a stable environment; emergencies do not. A freezing order delayed is capital lost; a tax notification ignored is a liability fixed; a critical path unsubstantiated is a penalty applied.

We deploy immediately to suspend liabilities, freeze dissipated funds, and secure protective orders.

When the window for recovery is closing, we provide the force required to keep it open.

Flight risks require force.

Cross-Border Enforcement

A judgment is only paper until it is enforced. When dealing with non-compliant debtors or fraudulent actors, the risk of asset dissipation is immediate. We execute rapid recovery protocols against non-compliant debtors and implement immediate protective measures. We coordinate simultaneous actions across jurisdictions, from London to Dubai, to defend client assets from aggressive seizure orders or to freeze the assets of elusive defendants.

Expedited Services

Immediate services when stakes are highest.

Assets are in Flight

You have intelligence that a debtor is liquidating assets, moving funds offshore, or restructuring holdings to frustrate a potential claim.

Seizure is Imminent

You are facing hostile ex parte attachment orders or vessel arrests that threaten your operational continuity and require immediate protective measures.

Enforcement is Blocked

You hold a judgment or award but are facing obstruction in local courts; we deploy parallel enforcement strategies in friendly jurisdictions to seize assets.

Suspend the liability. Shift the burden.

Tax Audit Response

Receipt of a tax audit notification or penalty assessment is not a request for dialogue; it is a trigger event for liability. The initial response determines the trajectory of the entire dispute. We intervene immediately upon receipt of notifications to suspend liability and shift the burden of proof away from the taxpayer. We restructure the narrative from the first hour to prevent procedural missteps from becoming permanent debts.

Critical Response

Protecting your interests from minute one.

Request Priority Assistance
Skip the queue for time-sensitive matters.

Assessment is Crystalizing

You have received a penalty assessment that requires immediate

payment or suspension to avoid compounding interest and penalties.

Burden is Misplaced

The authority is making assumptions about your business model (e.g., Transfer Pricing or Establishment Status) that place an unfair evidentiary burden on your operations.

Threatened Operations

A tax dispute is triggering cross-default clauses in your financing or threatening your trade license status, requiring an immediate stay of enforcement.

Immutable ledgers require immediate tracing.

Crypto Fraud Protection

In the digital economy, funds move at the speed of code. We do not view “system failure” or “hacks” as acceptable losses; we view them as actionable emergencies. We deploy emergency forensic tracing and cross-border injunctions to freeze dissipated assets and recover control of compromised digital wallets before funds are lost to mixers or “black hole” exchanges. We act while the code is still executing.

Rapid Support

Deploying our team within hours, not days.

Mobilize Response Team
Immediate 24/7 strategic support.

Wallets are Drained

You detect unauthorized outbound transactions from corporate or private cold storage and require immediate forensic tracing to identify the destination.

Exchanges Fail

You are locked out of an exchange due to platform insolvency or “technical maintenance” and require immediate creditor protection or asset freezing.

Fraud is Detected

You identify a “rug pull”, a compromised private key, or a fraudulent smart contract interaction and need to trace assets across chains for recovery.

Stop the clock before the bond is called.

EOT Construction Claims

On distressed infrastructure projects, time is money. The imposition of Liquidated Damages (LDs) can be fatal to a contractor’s cash flow. We substantiate critical path delays to secure immediate Extensions of Time (EOT), preventing the imposition of liquidated damages. We step into the friction point to document the reality of the site and secure the contractor’s commercial position before the project bond is called.

Time-Sensitive Matters

Immediate stabilization for operational threats.

Instant Matter Review
Get an immediate preliminary assessment.

LDs are Threatened

The employer has issued a notice of intent to levy Liquidated Damages that would cripple your project’s liquidity.

Bonds are at Risk

You anticipate the wrongful liquidation of performance bonds or bank guarantees and require an emergency injunction to prevent the draw-down.

Delays are Critical

You need an immediate forensic delay analysis to mathematically prove entitlement to an extension of time and immunize against penalties.
